DETAILED ACTION

Due to the complex nature of the claims, no request for an oral election is being made. Please see MPEP 812.01.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 are drawn to a method of preventing or treating obesity and obesity related complication, and a method of modulating adipogenesis in a subject comprising administering to the subject a COX-2 inhibitor alone or in combination with one or more weight-loss agents, classified in class 514, subclasses 406 and 909.
- II. Claims 13 and 14 are drawn to a therapeutic and pharmaceutical compositions comprising a COX-2 inhibitor and a weight-loss agent, classified in class 514, subclasses 315, 396 and 406 .

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the product as claimed can be used in a materially different process of using that product.

The two inventions are independent and distinct, each from the other as they have a separate status in the art as shown by their different and separate subject

matter for inventive effort. Further, a reference, which anticipates any one of the above inventions, would neither anticipate nor make obvious of the other inventions. Each such invention is capable of supporting its own patent. For these reasons, the restriction requirement is proper.

To be complete, applicants' response must include a provisional election even though the requirement may be traversed.

The applicants are required to elect a single invention for examination purposes.

Claim 15 will be examined with elected invention.

If the applicants elect Group I (claims 1-12), they must also elect what type of COX-2 inhibitor from claims 3-4 (COX-2 selective inhibitor) or claims 6-7 (a chromene COX-2 selective).

The examiner has required restriction between product and process claims. Where applicant elects claims directed to the product, and the product claims are subsequently found allowable, withdrawn process claims that depend from or otherwise require all the limitations of the allowable product claim will be considered for rejoinder. All claims directed to a nonelected process invention must require all the limitations of an allowable product claim for that process invention to be rejoined.

In the event of rejoinder, the requirement for restriction between the product claims and the rejoined process claims will be withdrawn, and the rejoined process claims will be fully examined for patentability in accordance with 37 CFR 1.104. Thus, to be allowable, the rejoined claims must meet all criteria for patentability including the requirements of 35 U.S.C. 101, 102, 103 and 112. Until all claims to the elected product are found allowable, an otherwise proper restriction requirement between product claims and process claims may be maintained. Withdrawn process claims that are not commensurate in scope with an allowable product claim will not be rejoined. See MPEP § 821.04(b). Additionally, in order to retain the right to rejoinder in accordance with the above policy, applicant is advised that the process claims should be amended during prosecution to require the limitations of the product claims. Failure to do so may result in a loss of the right to rejoinder. Further, note that the prohibition against double patenting rejections of 35 U.S.C. 121 does not apply where

the restriction requirement is withdrawn by the examiner before the patent issues. See MPEP § 804.01.
